Evaluation Report

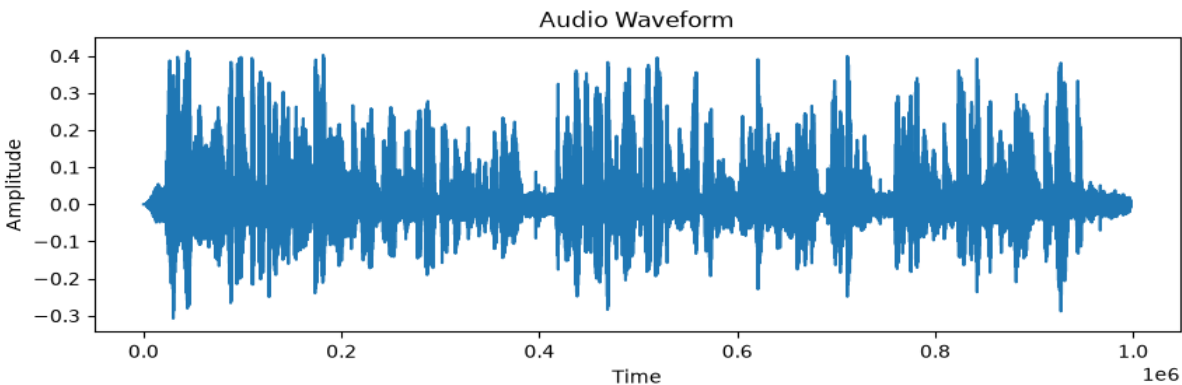

Reference Concept:

Machine learning is a branch of artificial intelligence that enables computers to learn from data without being explicitly programmed.

Student Transcription

Machine Learning is a branch of artificial intelligence that enables computers to learn from data without being explicitly programmed. It uses algorithms to identify patterns and make predictions. Machine Learning is usually in major recognition, recommendations, systems, fraud detection, healthcare and self-driving cars.

Audio Visualization

Evaluation Metric	Result
Semantic Similarity	0.89
Filler Word Ratio	0.000
Pause Ratio	0.194
Average RMS Energy	0.042
Final Understanding Score	83.58/100
Understanding Level	Strong Understanding

Interpretation

The evaluation score is generated by combining semantic similarity, filler-word analysis, pause ratio and speech confidence metrics.

Overall Feedback

Strong Understanding
